Select All | Unselect All Show All [ 01 02 03 ] ▶

selected Hosts

**Notes:**

Location (formerly Data Center) drop-down selector only appears if the customer has more than one location or data center (either from the Truth, or configured manually). Options should be the name of each Data Center, plus "All Locations", which is the default.

Host and Notes columns sort alphabetically. Default sort is Host ascending. Arrow only appears on sorted column and reflects ascending or descending.

Active monitor target is highlighted and listed first under Network Address column (actually, the other address is in a shade of grey). This is editable on the Edit Host page.

Monitor status icon reflects Live/Staged, Enabled/Disabled, Good/Alert.

Mouse-over on Status will indicate the status in text form and show the Date/Time of the last test that produced that status combination: "(Live) Good as of 12/25/01 14:21:00", "(Staged) Alert as of 12/25/01 14:21:00", "(Live) Disabled".
